

Exploratory Test Report

Exploratory Testing Purpose: *find bugs, improvements ideas for the Flasky web application.*

Testers: *Yuliia*

Date: *16.09.2021*

Timebox: *1 hour*

Scope: *registration, logging in*

Tester Tactics: *logic approach*

Bugs

1. User Information page | Column titles are incorrect

The bug report is in the same directory. File name bug_report.pdf

Improvements

Registration, login pages and forms

1. Outline of mandatory fields turns red - in case the user did not input the mandatory data and pressed the button with the texts "Register", "Log In".
2. Error message(ex. Error message text: "Please fill in the mandatory fields") appears if the user did not input the mandatory data and pressed the button with the texts "Register", "Log In".
3. Mandatory fields need to be marked, ex.– a red asterisk before the form label.
4. Add the fields appropriate validation for each field.
5. When a user login fails, it would be good if the information about the failure would appear on the same page without page reload.
6. When person registration has succeeded, good to inform the user – ex. "Thank you for the registration".
7. It's good to limit field size input to fx 256 characters or less.
